INTRODUCTION

Creating a registration form by using HTML, CSS and JavaScript. This website will take personal details, address details and family details. It will contain basic input fields which any registration form requires. Nowadays these website are required in almost every company, organization, etc. Whenever any organization require to collect data they need a registration form through which they get desired information.

EXISTING SYSTEM

This webpage will work on Windows, Linux, Android OS, Mac OS, etc. this webpage will work on all Browsers like Google Chrome, Microsoft Edge, Firefox, etc.

USE OF THE PROJECT

The registration form can be used from small industries to large industries. Registration form is a way to get connected with any company or any platform. Nowadays every platform has a registration process by using registration form. Without registration form it is almost impossible to get a client's data in well-organized manner.

Feasibility of Project

This project can be done by 2 people and with the help of some platform such as Vs Code Editor. Project is of a great use as it can be used by each and every company and organization for collection of important details. As the world is much more dependent on online mode of registration so our project is of great use.

FUNCTIONAL SPECIFICATION

Our website which is a registration form can be used as an important information gathering system. This website has 2 parts in first part it takes user's personal and ID details. In second part it takes address and family details.

Software Specification:

- Hard disk : 4 GB AND ABOVE
- Display :720 PX ABOVE

FUTURE SCOPE

This project can be accessed online. Through this project a lot of companies and organizations can take basic information regarding user's personal and family details. Using a registration form to collect important details of user is trending in nowadays and it will be continue in future also. As we can see for using any platform we should have an account at that platform and without registration form it is almost impossible to register for specified platform. We can say that for long years for registration purpose we are going to use a registration form which is of great use.
